> 2193 DATE MAILED: 04/21/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No.	Applicant(s)
	10/081,910	HARS, LASZLO
	Examiner	Art Unit
	Chat C. Do	2193
The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply		
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).		
Status		
1)⊠ Responsive to communication(s) filed on <u>15 March 2005</u> .		
2a)⊠ This action is FINAL . 2b)□ This action is non-final.		
3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is		
closed in accordance with the practice under Ex parte Quayle, 1935 C.D. 11, 453 O.G. 213.		
Disposition of Claims		
4) Claim(s) <u>1-4,6-12,14-18,20-22 and 24-26</u> is/are pending in the application.		
4a) Of the above claim(s) is/are withdrawn from consideration.		
5) Claim(s) is/are allowed.		
6) Claim(s) <u>1-4,6-12,14-18,20-22 and 24-26</u> is/are rejected.		
7) Claim(s) is/are objected to.		
8) Claim(s) are subject to restriction and/or election requirement.		
Application Papers		
9) The specification is objected to by the Examiner.		
10) ☐ The drawing(s) filed on is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.		
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).		
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).		
11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.		
Priority under 35 U.S.C. § 119		
12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).		
a) All b) Some * c) None of:		
1. Certified copies of the priority documents have been received.		
2. Certified copies of the priority documents have been received in Application No		
3. Copies of the certified copies of the priority documents have been received in this National Stage		
application from the International Bureau (PCT Rule 17.2(a)).		
* See the attached detailed Office action for a list of the certified copies not received.		
Attachment(s)		
1) Notice of References Cited (PTO-892)	4) Interview Summary	
2) Notice of Draftsperson's Patent Drawing Review (PTO-948) 3) Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)	Paper No(s)/Mail D 5) Notice of Informal F	ate Patent Application (PTO-152)

Art Unit: 2193

DETAILED ACTION

1. This communication is responsive to Amendment filed 03/15/2005.

2. Claims 1-4, 6-12, 14-18, 20-22, and 24-26 are pending in this application. Claims 1, 8, 16, and 21 are independent claims. In Amendment, claims 1, 7-8, 15-16, 20-21, and 25 are amended and claims 5, 13, 19, and 23 are cancelled without prejudice or disclaimer. This Office action is made final.

Claim Rejections - 35 USC § 112

- 3. The following is a quotation of the second paragraph of 35 U.S.C. 112:
 The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 4. Claims 1-4, 6-12, 14-18, 20-22, and 24-26 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Re claim 1, the limitation "exponential overlapping count" is indefinite because its definition cited in the claim is not exponential overlapping count but rather the claim defines the exponential overlapping count as a linear function count in lines 12-14. The expression in line 12 becomes linear function count because n is defined as a very large number (e.g. would be infinity) and the relationship of n parameter is not defined. Since n is not defined in the claim as a closed range but rather n is a very large number, then alpha will be 1 because 1/ very large number would be approximately equaled to zero. Based on the explanation above, $A_{new} = alpha * A_{old} + b = 1*A_{old} + b = A_{old} + b$. For

Art Unit: 2193

examination purposes, the examiner disregards the expression cited in lines 12-14 and considers the exponential overlapping count as an overlapping count algorithm. In addition, the limitation "exponential averaging count" in line 10 lacks an antecedence basis. For examination purposes, the examiner considers the exponential averaging count as exponential overlapping count. Claims 8, 16, and 21 have the same rejection.

Thus, claims 2-4, 6-7, 9-12, 14-15, 17-18, 20, 22, and 24-26 are also rejected for being dependent on the rejected base claims 1, 8, 16, and 21 respectively.

Claim Rejections - 35 USC § 103

- 5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 6. Claims 1-4, 8-12, 16-18, 21-22, and 26 are rejected under 35 U.S.C. 103(a) as being obvious over Brennan et al. (U.S. 5,675,649) in view of NIST ("Random Number Generation and Testing").

Re claim 1, Brennan et al. disclose in Figure 2 a method for testing randomness when generating a random number (abstract and Figure 2 wherein the test is done in step or process 30-34), the method comprising the steps of: generating (output of 30) random sequences of binary bits; applying (input into the test in 32) generated random sequences to a test at a predefined block interval of k bits at a time to compute an average number of occurrences for each predefined block; and, determining (e.g. 34) whether generated

random sequences are sufficiently random by comparing the output of exponential overlapping count operation A to a predetermined acceptance range. Brennan et al. do not disclose the test is an exponential overlapping count operation A. However, NIST discloses in pages 2-3 an exponential overlapping count operation A (e.g. overlapping or periodic template matching test). Therefore, it would have been obvious to a person having ordinary skill in the art at the time the invention is made to add the test as an exponential overlapping count operation as seen in NIST's invention into Brennan et al.'s invention because it would enable to simplify to determine the randomness of a random sequence to increase the system performance.

Page 4

Re claim 2, Brennan et al. further disclose in Figure 2 the step of determining that generated sequences are sufficiently random when the output of exponential overlapping count operation A falls between predetermined acceptance range (e.g. col. 22 lines 35-43 wherein the number of time is one).

Re claim 3, Brennan et al. in view of NIST do not disclose in Figure 2 the step of notifying that generated random sequences are not sufficiently random when the output of exponential count operation A falls outside of predetermined acceptance range.

However, Brennan et al. mentioned about the trust between the user and the generation of randomness (page 1 lines 38-44) that the user would like to know the whole operations in order to truly trust. Therefore, it would have been obvious to a person having ordinary skill in the art at the time the invention is made to add a step of notifying the user if the generated random bits are not sufficiently random as suggested in the drawback of background of the invention into Brennan et al. in view of NIST's invention because it

would enable to enhance the system's flexibility by alerting the operator to aware the insufficient random bits.

Re claim 4, Brennan et al. further disclose in Figure 2 the step of generating a new set of random sequences when the output of exponential count operation A falls outside of predetermined acceptance range (e.g. loopback into the random generator sequence 30 if it fails or fall outside the predetermined acceptance range in Figure 2).

Re claim 8, it has same limitations cited in claim 3. Thus, claim 8 is also rejected under the same rationale as cited in the rejection of rejected claim 3.

Re claim 9, Brennan et al. further disclose in Figure 2 the step of: repeating said steps (a) - (c) until any of the computed exponential averaging value falls outside of predetermined acceptance range (e.g. looping Figure 2 for every time to generate a new random bits).

Re claim 10, it has same limitations cited in claim 3. Thus, claim 10 is also rejected under the same rationale as cited in the rejection of rejected claim 3.

Re claim 11, it has same limitations cited in claim 4. Thus, claim 11 is also rejected under the same rationale as cited in the rejection of rejected claim 4.

Re claim 12, Brennan et al. further disclose in Figure 2 random number generator is embedded in a smart card (Figure 2).

Re claim 16, it is an apparatus claim of claim 1. Thus, claim 16 is also rejected under the same rationale as cited in the rejection of rejected claim 1.

Re claim 17, it is an apparatus claim of claim 2. Thus, claim 17 is also rejected under the same rationale as cited in the rejection of rejected claim 2.

Art Unit: 2193

Re claim 18, it is an apparatus claim of claim 3. Thus, claim 18 is also rejected under the same rationale as cited in the rejection of rejected claim 3.

Re claim 21, it is an instruction claim of claim 1. Thus, claim 21 is also rejected under the same rationale as cited in the rejection of rejected claim 1.

Re claim 22, it is an instruction claim of claim 3. Thus, claim 22 is also rejected under the same rationale as cited in the rejection of rejected claim 3.

Re claim 26, Brennan et al. in view of NIST do not disclose the detector unit comprising a ring buffer and a plurality of accumulators. However, the examiner takes an office notice that the ring buffer and accumulators are basis components widely used in the art for generating random numbers. Therefore, it would have been obvious to a person having ordinary skill in the art at the time the invention is made to add the ring buffer and accumulators as conventionally in the art into Brennan et al. in view of NIST's invention because it would enable to increase the system performance and reduce the circuitry for producing the random sequence.

Allowable Subject Matter

7. Claims 6-7, 14-15, 20, and 24-25 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Art Unit: 2193

Response to Arguments

8. Applicant's arguments filed 03/15/2005 have been fully considered but they are not persuasive.

Even though, the applicant incorporates allowable limitations/features to independent claims. However, it does not clearly define the expression as cited in the rejection above under U.S.C. 112.

Conclusion

9. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Chat C. Do whose telephone number is (571) 272-3721. The examiner can normally be reached on 7:00AM to 5:00PM M-Th.

Application/Control Number: 10/081,910
